

Seamless Microcapsule Delivery

- The first effective, technologically sound bifidobacteria delivery system ever offered
- The ultimate Probiotic – the culmination of years of research
- Two billion *Bifidobacteria longum* with one billion lactic acid producing bacteria
- Combined with refreshingly tasty granules of oligosaccharides that promote the growth of bifidobacteria
- Seamless, triple layer capsules assure delivery. They protect the bacteria from stomach acid with 2.4mm triple walled capsules
- Restores a healthy balance of intestinal flora
- Convenient, go anywhere, easy open, single dose tubes. Easy and enjoyable to take
- Take them anytime of day - before, after, or during meals
- Once you experience it, you'll want to share it
- Gluten Free
- Shelf Stable

Superlative Probiotic

SUGGESTED USE As a dietary supplement take one tube daily. Do not take with warm or hot liquids as this may weaken the protective capsules. Do Not Chew or break the protective capsules. Put the tube contents under your tongue or in you mouth, saliva will develop, swallow, or take with water or a room temperature or cool beverage.

IMPORTANT Do Not feed to infants and children under 3 years old. For children of 3 to 7 years, begin with a half tube. Because **Bifa-15** is food and not a medicine, you do not have to worry about side effects. You can take it any time of the day since the patented seamless capsules protect it from stomach acids activated by food. You can increase use to 2 or 3 tubes a day as you wish. Each person is different. In general, it takes about a month to stabilize the intestinal condition after you start regular use of supplemental **Bifa-15**.

STORAGE Store away from heat. Potency will decline over time, and heat shortens shelf life. Do not, for instance, leave it in a hot car.

CAUTION If you are allergic, under medical care, or on a restricted diet, consult your health care professional before using **Bifa-15**. Discontinue use immediately if you develop an allergic reaction, stomach upset, skin irritation, or diarrhea.

Ingredients Erythritol, Lactulose, Vegetable Oil, Gelatin, Raffinose, Glycerol, *Bifidobacterium longum*, Citric Acid, Soy Lecithin, *Lactobacillus acidophilus*, Lemon Oil, Pectin, *Lactobacillus gasseri*, Carotene Containing Colorant

Bifa-15®

A probiotic supplement to deliver friendly live bacteria into the large intestine.

An exclusive delivery system of protective, patented, triple layer seamless microcapsules.

Restores a healthy balance of intestinal flora.

Easy, portable, single dose tubes with a pleasant, refreshing taste. Very convenient.

EDENBALANCE®

Bifa-15®

FORTITUDE

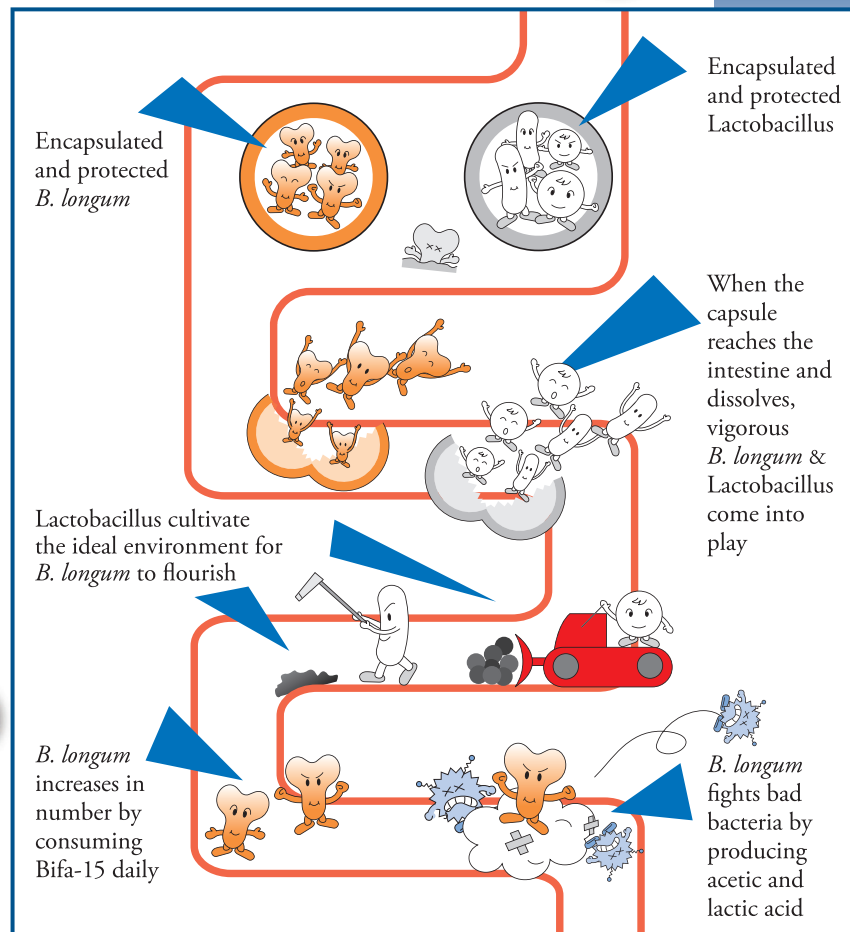

EDEN Bifa-15 is the superlative system for ensuring delivery of live, friendly bacterium to the large intestine. Each tube contains two billion *Bifidobacterium longum* and one billion Lactobacillus (*Lactobacillus acidophilus* and *Lactobacillus gasseri*) protected in small 2.4mm seamless microcapsules interspersed with oligosaccharides - refreshingly tasty granules that encourage growth and multiplication of bifidobacteria*. They are a pleasure to take. One tube is one dose. Tear-open tubes are convenient to carry in a purse, bag, or pocket and can be taken at any time of the day, before, after, or during meals.

B. longum cannot survive stomach acids or oxygen. The enteric seamless capsules of **Bifa-15** are designed to deliver the living bacterium safely to the large intestine, their natural home. The three protective layers and seamless structure of the capsule protects the bacteria from oxygen, stomach acids, and provides some protection from heat and light. However, these bacteria are living organisms and should be treated with care in keeping them before their use.

Bifidobacterium longum is obligate anaerobic and cannot live in the presence of oxygen. It is unique in producing both acetic acid and lactic acid, which can suppress unfriendly bacteria*. *B. longum* also produces vitamins such as B1, B2, B6, B7 (biotin), B9 (folic acid), and B12. The lactic acid bacteria (*L. acidophilus* and *L. gasseri*) are facultative anaerobic and live with or without oxygen; with the oligosaccharides they help to increase the activity and longevity of *B. longum* in the large intestine. **Bifa-15**'s formula takes advantage of the synergies amongst these three active ingredients.

* This statement has not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

Many factors can reduce the number of bifidobacteria and lactic acid bacteria in our intestines. Its population, even in well functioning intestines, seems to decline as we age. Diets low in foods that bifidobacteria and lactic acid bacteria need to grow (whole food is better than refined food) can reduce their number. A stressful lifestyle, excessive alcohol, and drug consumption reduce their numbers. Antibiotic use can disrupt and reduce intestinal flora, and upset the crucially important balance of bacteria.

Even in healthy intestines, beneficial and deleterious bacteria co-exist. Friendly bacteria help maintain a well functioning digestive system*, while unfriendly bacteria can produce harmful substances like ammonia, hydrogen sulfide, and amines. When bifidobacteria and lactic acid bacteria decrease, the healthy balance of the intestinal flora tends to become disrupted causing unwanted results.

Restorative • Bracing • Rejuvenating
Easy and Enjoyable to take
