

Seamless Microcapsule Delivery System

- The first effective, technologically advanced bifidobacteria delivery system ever offered
- The Ultimate Probiotic and the culmination of years of research
- Two billion *Bifidobacteria longum* with one billion lactic acid producing bacteria
- Combined with refreshingly tasty granules of oligosaccharides that promote the growth of bifidobacteria
- Seamless, triple layer encapsulation assures delivery by protecting the bacteria from stomach acids with 1mm micro-capsules
- Restores a healthy balance of intestinal flora
- Refreshingly bright lemon - gardenia taste makes it easy to swallow
- Convenient, go anywhere, easy open, single dose tubes. Easy and enjoyable to take too
- Take anytime of the day, before, after or during meals
- Non GEO derived
- Once you experience it, you'll want to share it
- Wheat free and non gluten

To take **Bifa-15**, open the tube at the dotted end and pour it into your mouth. **Do not chew** ~ the capsules must remain whole. Do not take with warm liquids which can melt the protective capsules. Unlike other probiotics **Bifa-15** does not require refrigeration because the capsules and tube protect it from heat, light and moisture. It should be protected from intense heat; don't leave it in a hot car. Do not freeze and store away from heat. Please use within 18 months of purchase.

Important ~ Do not feed **Bifa-15** to infants or children under 3 years old. For children of 3 to 7 years begin with a half tube. Please read the product insert for additional suggestions and cautions. Consult your health care professional before you use **Bifa-15**, if you are allergic, under medical care or on a restricted diet.

Ingredients: Erythritol, Lactose, Glycerin, Raffinose, Gelatin, Citric Acid, Bifidobacterium longum, Enterococcus faecalis, Lactobacillus acidophilus, Soy Lecithin, Pectin, Lemon Oil, Beta-carotene, Gardenia fruit.

Bifa-15

A Probiotic Supplement that delivers three billion friendly, essential bacteria directly to the large intestine.

An exclusive delivery system of protected, patented, triple layer, seamless microcapsules.

Restores a healthy balance of intestinal flora.

Convenient, portable, single dose tubes.
Pleasant, refreshing taste.
Easy to take.

For those seeking to balance and strengthen their digestive system with bifidobacteria, finding a probiotic that delivers a functional dose of living bacteria to the intestine has been a challenge. Now, with **Bifa-15** it is easy, quick, and a pleasant experience to do so with certainty. Although many probiotic supplements are offered, none have the means to protect these extremely fragile bacteria before reaching the intestine where they can thrive. **Bifa-15** microcapsules are unlike any other probiotic capsules in the world. The exclusive, patented, microcapsule is the result of decades of research and innovation by the 200 year old Morishita Jintan Company, a conscientious innovator of food science, and nutrition. Other capsules are pre-formed, filled, sealed, and have an inherent weakness, a seam. **Bifa-15** microcapsules are filled and formed simultaneously providing a seamless surface that is uniquely impervious to stomach acid and oxygen. The capsules and tube are specifically designed to protect the fragile bacteria and to preserve their potency.

Bifidobacterium longum is considered to be the most important beneficial intestinal bacterium. Studies show its acetic acid metabolism suppresses harmful bacteria. It also generates lactic acid, B vitamins, folic acid, enzymes, and other nutrients. Lactic acid producing bacteria cultivate the ideal environment for Bifidobacteria longum to flourish. Many factors can reduce our level of bifidobacteria. These important probiotic organisms naturally decrease as we age. Stress, antibiotics, alcohol, caffeine, excessive use of over the counter medication, excess animal fat and a

diet high in refined food will also reduce their numbers.

An effective dose into the intestine has been impossible until now. Bifidobacteria longum are very weak against stomach acid and oxygen. **Bifa-15**, using its unique patented seamless capsule technology, effectively delivers living bacteria safely to the large intestine; their natural home address. The triple protected, three layer seamless structure of the capsule protects the bacteria from air, from stomach acids, and provides additional protection from heat and light. **Bifa-15** comes in quick, easy

and fun to use single dose tubes, thirty to a box. Each provides two billion Bifidobacteria longum and one billion Lactic acid producing bacteria (Lactobacillus acidophillus and Enterococcus faecalis) protected by 1mm microcapsules. The bacteria, suspended in vegetable oil, are only released three minutes after reaching the intestine. Each tube also contains refreshing granules of lemon oil 'oligosaccharides' known to be an essential factor in promoting the growth of bifidobacteria because they are the bacteria's favorite food. Flower essences provide refreshing flavor and stimulate saliva allowing you to easily swallow the capsules, even without water.

In our intestines beneficial and deleterious bacteria co-exist. Friendly bacteria maintain a properly functioning digestive system*, while unfriendly bacteria can produce harmful substances like ammonia, hydrogen sulfide, and amines that lead to maladies. When bifidobacteria and lactic acid bacteria decrease, the healthy balance of the intestinal flora becomes disrupted. A healthy balance is assured with a regular or intermittent use of **Bifa-15**.

Because **Bifa-15** is food and not a medicine you do not have to worry about side effects. You can take it any time of the day, before, after or during meals for as long as you wish. Take at least one tube a day for thirty days. Since all of us are different, some feel the benefits within an hour while others may notice changes after a few days.

"An ounce of prevention is worth a pound of cure."
