

GMO FREE Since 1993

Foreseeing commercialization of genetically modified food, Eden Foods established policy against genetically modified organisms (GMOs) and their derivatives in food beginning with the letter at right in 1993. Since then, Eden has remained diligent in doing all that is necessary to keep EDEN foods from being contaminated with GMOs.

The New York Times used a laboratory to test for GMOs in eleven soy and corn based foods.

The only one that tested negative was

EDENSOY® soymilk.

13 February 1993 Policy Statement
Re: Genetically Engineered Foods

Dear Eden Patron,

The trend to commercialize genetically engineered food compels Eden Foods to assure you that we will not support or participate in this movement away from natural foods as they are manifest by Nature.

Please let this letter serve as our affidavit and your assurance that Eden Foods will not purchase or sell any food or food ingredient known to be genetically engineered, and that we will act to best ensure our avoidance of such.

You can depend upon Eden Foods to be diligent in avoiding any aspect of the commercialization of genetically engineered food. We object to the introduction of these foods for human consumption in any manner, for any reason. We are fundamentally opposed to these foods for moral, ethical, and practical reasons.

With more than twenty-four years in the natural food industry, we remain unaware of any other food company that spends a greater percentage of its time and money to be certain of the growing, ingredients, and processing used for foods carrying its brand name.

Very truly yours,
Michael J. Potter, Chairman

IRRADIATED FOOD BAN *Since 1988*

Realizing powerful forces were determined to make food irradiation common place, Eden wrote the letter at right in 1988 addressing it.

Food radiation and irradiation are contrary to human health and basic personal rights. Eden Foods' policy remains Zero Tolerance. Rigorous selection and screening of every ingredient, including herbs, spices, and seasonings is assurance that no EDEN food or ingredient is, has been, or will be subject to irradiation or contain its components. We encourage vigorous & vigilant avoidance of them.

13 August 1988 Policy Statement
Re: Food Irradiation

Dear Concerned Customer of Eden Foods,

Please let this letter serve as our affidavit and your assurance that no Eden brand food has been, is being, or will ever be subjected to the new food processing technique 'irradiation' or one even closely resembling it. No Eden brand food has any ingredient in it that has ever been subjected to irradiation.

After more than 19 years in this natural foods industry, we are not aware of another food manufacturer that spends as much effort, in both time and money, to be certain of the ingredients and processing techniques used in or on the food items that they purchase as does Eden Foods.

Thank you for your interest and concern.

Please do your utmost to encourage the understanding of the food irradiation process, and more importantly, please do your best to make sure that food products that are irradiated are required to carry labeling that makes this fact known to the consumer.

Be a vocal consumer and demand proper notification whenever this new method of food preservation is used.

Eden Foods supports any legislative action that would ban human food irradiation or require clear consumer labeling of food that is irradiated.

Sincerely,
Michael Potter, Chairman
