

## Genetically Engineered Food AVOIDANCE

In February 1993 Eden Foods banned genetically engineered food. Since, it has diligently created and constantly improved its system of acquiring pure natural food void of genetically engineered DNA and RNA. This demanding and costly endeavor has been forced upon us by unregulated and untested commercial, biological experiments. Eden is proof GEO free food is doable and we have the records, tests, and food to demonstrate it.

Eden's GEO avoidance is dependant upon:

- Knowing the land, our growers, their families, and suppliers
- Using traditional, natural methods in food handling, processing, and packaging
- Thorough audit trails and meticulous tracking records
- In house and third party GEO testing

Eden Foods is steadfast in doing whatever is necessary to protect and enhance the purity of food.

Very truly yours,  
the Staff at Eden Foods
